

Agenda for Today.

- 1) callback functions
- 2) Higher order functions (writing clean code)
- 3) Inbuilt higher order functions (map, filter, reduce)
- 4) Interview questions

1) callback functions.

A cb function is a function that can be passed as an argument to another function.

DRY Principle.

~~Do~~ Do not Repeat Yourself

Higher Order Functions.

These are the functions that can take in another function as an Argument.

Starting at sharp 10:25 PM

Inbuilt higher order methods.

Map ✓

Filter

Reduce.

Map. → Map is a higher order method that takes a function as an Argument, it itself takes care of looping through each and every element one by one & takes care of applying the logic to it as well. and it also returns a new Array.
